

Chillax yumyum

Some what landed on the friendslop genre where the game is about you running your restaurant
You and your friend's job is to Cooking the food that was order in the moring and deliver it on
time and you have to leave your shop to deliver to the correct house

My role

Level/System design

Art and 3d assets

World building and character design

System

Gather ingredient > cook > deliver

NPC and Its roles

Mr.Krapow: your boss, set standard of quota for each day

Porpla: Local Cat Fish fisherman that helps you conver materials into anothers for examples
flour into rice

Porpla

Larnpah: local auntie that sells you useful items that helps you ready for the next day example but spice so you dont need to grind for next day, but extra bike so more transportation

Larn Pah

Nang tani, banana ghost tree based on Thai folklore and will give you random blessing based on how well you have treat her tree

Officer HuaHin: Police that roam around the town and will fine you if you dont wear helmet while riding bike

Since player wont beagle to see eachother while one is delivering, we attach a camera to the helmet so people at the shop can see what the other pler are up to
And to prevent player form not wearing helmet we added this officer to punish and try to get player to always wear helmet

DJ Octaballin

Gange leader that will try to one up players and force them to play its mini game
A fun ice breaker

Level and world building

Chillax Yummy - Game Design Overview

This document outlines the core design, mechanics, and setting for **Chillax Yummy**, an online co-op experience that elevates the "**Friendslop**" genre by combining chaotic cooking, timely delivery, and detailed world-building. The game is designed to provide a high-quality, fun, and funny experience rooted in a specific cultural setting.-----My Role & Contribution

My primary contributions cover the overall game design, level design, and art assets, including:

- **Game & System Design:** Defining the core game loop, cooking mechanics, and progression system.
- **Level Design & World Building:** Conceptualizing the map layout and ensuring the world reflects the intended local atmosphere.
- **Art and 3D Assets:** Creating the art style, character design, and modeling all major 3D assets.

Core Game Concept

Genre: Co-op Restaurant Management / "Friendslop"

Objective: Players (you and your friends) must work together to cook customer orders and deliver them on time, aiming to meet a daily **Total Ratings Quota** set by your boss.

Game Loop:

1. **Receive Orders:** The Boss (Mr. Krapow) provides orders detailing the food, delivery location, and a time limit.
2. **Gather Ingredient:** Players must travel around the neighborhood to gather raw ingredients.
3. **Cook Meal:** Ingredients are prepared using a set of creative and challenging mechanics.
4. **Deliver:** Players use vehicles to deliver the food, avoiding NPCs who try to steal the delivery.
5. **Receive Ratings:** Post-delivery, the store receives a customer rating that is banked towards the daily quota.
6. **End of Day:** The Boss reviews the total ratings. Failure to meet the quota results in a loss; success moves the game to a more difficult next day.

Detailed System Design: Cooking Mechanic

The cooking system is designed for high-stakes, chaotic co-op play, rewarding creativity while punishing sloppiness.

Process & Rationale:

Mechanic	Behavior
Rationale	

-------	--

Creativity	Seasoning and cooking methods are flexible. The final customer rating is affected by player's creative choices—it can be either better or worse than the base expected rating.	Encourages experimentation and
-------------------	--	--------------------------------

supports the "fun and funny" experience by allowing for unexpected (and risky) outcomes. |

| **Preparation** | Steps include automated rice cooking, heating a pan until it turns red, precise actions for cracking eggs (requires a specific force), and pouring oil (too much or too little reduces the score). | Introduces skill-based mini-games and promotes effective time management in the kitchen. |

| **Delivery Prep** | **Flicking the Pan** is a critical step; failure to do it in time results in burnt food and a lower rating. The player finishes the meal by interacting with the cooked item using a "TO GO" box. | Creates tension and a high-risk conclusion to the cooking phase. |

Food to Cook (Example Recipes):

- **Pad Krapow:** Basil, Oil, Meat, Rice.
- **Fried Rice:** Oil, Egg, Rice, Meat.
- **Rice Omelet:** Egg, Oil, Rice.

Level and World Building

The game is set in a vibrant world based on the **Thailand local atmosphere, specifically HuaHin**. This setting dictates:

- **Map Layout:** Designed to include local points of interest, necessary ingredient locations, and varied delivery routes to maximize player interaction and challenge.
- **Aesthetic:** The art style is defined as **PSX, funny, cute, and cool**, utilizing stylized 3D assets that I have modeled.

NPC and Their Roles

NPCs are designed to directly influence the player's progression, resource management, and navigation through the town.

NPC	Role in the Game
Mr. Krapow	The Boss: Sets the daily quota, provides all incoming orders, and determines game progression/loss condition based on the end-of-day total ratings review.

Porpla	The Exchanger: A local Cat Fish fisherman who helps convert materials, for example, exchanging Flour for Rice or Noodle .
Larnpah	The Vendor: A local auntie who sells useful items to prepare for the next day, such as spices (reducing the need to grind ingredients) or extra bikes (increasing transportation capacity).
Officer HuaHin	The Enforcer: A police officer who patrols the town. They will fine players for not wearing a helmet while riding a bike, ensuring players use the helmet-cam feature for co-op visibility.
Nang Tani	The Blessing Giver: A banana ghost tree based on Thai folklore. She will give players a random blessing depending on how well they have treated her tree.
DJ Octaballin	The Obstacle: A gang leader who tries to "one-up" the players and forces them to play a required mini-game.
Swipers/Monkeys	Delivery Hazards: NPCs that actively try to steal the food during delivery, forcing players to defend their meals and navigate carefully.

- **Player Visibility:** Since players are split between the shop and delivery, a **helmet-mounted camera** system is implemented. The player delivering can stream their first-person view back to the player at the shop, enabling better communication, planning, and ensuring the delivery player is always wearing their helmet (to avoid Officer HuaHin's fine).

Art Style: PSX, funny, cute, cool.

-based on thailand

-location of the ingredient

- shop design
